

Borland

Founded in 1983, Borland Software is the leader in Open Application Lifecycle Management (ALM) -- open to customers' processes, tools and platforms -- providing solutions that transform software delivery into a more manageable, efficient and predictable business process. Borland software, services and training help customers manage, measure and improve each critical process within the delivery lifecycle, including Lifecycle Quality Management (LQM). Borland's LQM solution incorporates quality into the software application lifecycle from the very beginning, helping customers align business priorities and quality expectations with project requirements, development activities and software testing.
