

Cigital, Inc.

Last Updated Wednesday, 30 May 2007

Whether developed in-house, acquired or outsourced, today's businesses and government agencies depend on software for their business and mission success. When applications are not secure and reliable, the organization will fail.

At Cigital, we specialize in software security and quality. For over a decade, our expert consultants have implemented programs that assure our clients' software is secure and reliable while enabling them to dramatically improve how they build and deploy software. Cigital's strategic advisors wrote the books on software security and quality with such publications as, *Exploiting Software*, *Building Secure Software*, and *Software Assessment*.
